

Face Fit Test Kit

if the face fits... wear it!

Selection should include fit testing to ensure the wearer has the correct device.

Regulation 7 COSHH 2002 (as amended)

FFTK

Introducing Alpha Solway's Qualitative Face Fit Test Kit

Training in the proper use and care of respirators has been mandatory in the COSHH (Control of Substances Hazardous to Health) regulations since 1989. The 2002 revision of the COSHH regulations and the Approved Code of Practice (ACoP) now require that fit testing of Respiratory Protective Equipment (RPE) be carried out. Only respirators that are loose fitting and rely on airflow through the device are exempt e.g. powered helmets.

There are various test methods, the two main options being Qualitative and Quantitative.

Alpha Solway has developed this Qualitative Face Fit Test Kit (ref. QLTK1) to enable wearers of negative pressure half masks and disposable respirators to be fit tested correctly and economically. In addition our skilled professional staff are available to conduct 'Train the Trainer' courses designed to enable companies to carry out the fit testing of wearers with complete confidence.

- Bitrex® solution (bitter)
- Robust hood
- Compact, sturdy and portable storage case
- Complete instructions in DVD and hard copy formats
- Spare parts available
- Easy to use
- Full training package available

Having worked closely with the BSIF and HSE over the past 18 months in the development of a suitable accreditation scheme for Face Fit Testing, Alpha Solway are proud to be one of the first **'FIT2FIT – accredited RPE Fit Test Providers'** which is now recognised within HSE 282/28 Fit Testing Guidance Notes.

The scheme confirms the competency of a particular individual to perform face piece fit testing, by ensuring they have passed an industry recognised exam and demonstrated a thorough knowledge of how to fit test in one or more of the test methods.
